

WRC Consents – S42A Questions of Clarification

- 1) Dr Jenny Webster-Brown critiques section 4.2 of Appendix S to the AEE. The matter addressed is the potential leaching from overburden used to backfill underground workings and voids. Given the depth of these workings I presume the only issue of concern is the potential effect on groundwater that may find its way into the pit once refilling commences. Is that correct?
- 2) What are the worst case implications of Dr Webster-Brown's concerns on pit lake water quality?
- 3) Was a review report provided by Dr Ngaire Philips of Streamlined Environmental Ltd, and if so may we have a copy of it?
- 4) Does Appendix E contain all of the new and amended conditions discussed and recommended in the body of the WRC S42A report?
