

## Section 6:

# CONSERVATION AND HERITAGE

## 6.1 HISTORIC HERITAGE FEATURES

### 6.1.1 BACKGROUND

#### (1) INTRODUCTION

- (a) Part 2 of the Resource Management Act 1991, places a responsibility on the District Council to recognise and provide for appropriate cultural heritage protection.
- (b) The purpose of the Act (Section 5) and a number of the matters set out in Sections 6 and 7 provide the mandate and responsibility for cultural heritage identification and protection. In particular, the following matters must be recognised and provided for as a matter of national importance:
  - "The protection of historic heritage from inappropriate subdivision, use, and development"*  
(Section 6(f) RMA)
  - "The relationship of Maori and their culture and traditions with their ancestral lands, water, sites, waahi tapu and other taonga."*  
(Section 6(e) RMA)
- (c) Some such sites, waahi tapu and other taonga may be archaeological sites or sites of historic value. Consultation with the Tangata Whenua is needed to identify waahi tapu areas and whether any sites need special protection through the District Plan.
- (d) These sites, waahi tapu and other taonga may be taonga of the Tangata Whenua but not necessarily so. Most buildings and structures of heritage value are likely to be of non Maori origin. Section 74 requires Council in preparing its District Plan to have regard to a relevant entry in the Historic Places Register which is prepared under the Historic Places Act 1993.

#### (2) ROLE OF HISTORIC PLACES ACT 1993

- (a) The Historic Places Act 1993 ('HPA') provides for the continuation of the New Zealand Historic Places Trust and Board of Trustees. The Trust is required to compile and keep a register of historic places, historic areas, waahi tapu and waahi tapu areas. The Trust can purchase sites, enter into heritage covenants, provide advocacy and advice etc.
- (b) There are two categories of registration applying to historic places:
  - (i) **Category I:** Which are of "special or outstanding historical or cultural heritage significance or value"
  - (ii) **Category II:** Which are of "historical or cultural heritage significance or value."
- (c) The Register is primarily an advocacy tool, indicating the nature and location of historic places and areas within a district or region. The inclusion of a site on the register does not in itself protect the feature or area unless a heritage order has been taken out under the provisions of the Resource Management Act 1991.

- (d) The Historic Places Act 1993 (Sections 26 & 27) provides interim protection for places proposed for registration. This interim protection is complemented by Sections 194 and 195 of the Resource Management Act 1991, which provide for the interim registration to be treated as if it were a notice of requirement for a heritage order. Once the registration process is completed under the Historic Places Act 1993, the interim protection lapses.
- (e) Council is to be notified of proposals for interim registration and of final registrations. The Trust is required to maintain and supply to Council a record of registered sites and Council is to keep this record available for public inspection.
- (f) Unlike the situation for buildings and areas, archaeological sites are protected under the Act (whether they are registered, recorded or neither). Trust consent is required before any site can be destroyed, damaged or modified (Section 11 and 12 HPA).
- (g) The Trust must also be served notice of any resource consent application where the land is identified in the plan as having heritage value, or is subject to a heritage order.

### **(3) CULTURAL HERITAGE OF THE DISTRICT**

- (a) The character of the Hauraki District is derived from its distinctive richness and variety of landforms, water bodies and vegetation, and from its history of human settlement. From being a land largely of swamps and forests, the district was settled firstly by Maori and much later by Europeans. Over the years the land has changed into the developed pastoral area and associated townships evident today.
- (b) Due to the swampy nature of a large part of the District, the land was not densely populated by Maori. Physical signs of their occupation, such as pa sites, urupa and shell middens are found largely along the banks of the main rivers and the coastline where an abundant food source was available. The distribution of recorded archaeological sites is shown on the planning maps.
- (c) Early European occupation is largely evident in and around the settlements of Paeroa and Waihi, in the form of buildings and structures associated with or built during the gold mining in the area. For example the Crown Battery and Victoria Battery sites, ruins in the Karangahake Gorge, and buildings such as the Waihi Courthouse and Karangahake School.
- (d) In addition to their visual and cultural value these features provide a physical link with the District's past. Their value to present and future generations lies not only with their visual qualities but also with what they can tell us about the past, the links they provide with ancestors and their spiritual value for the tangata whenua.

### **(4) IDENTIFICATION OF THE DISTRICT'S CULTURAL HERITAGE RESOURCES**

- (a) In identifying those heritage items worthy of protection, the Council has utilised the following sources:
  - (i) The register of historic places, historic areas, waahi tapu sites and waahi tapu areas established by the Historic Places Trust under the provisions of the Historic Places Act 1993.
  - (ii) The record of known archaeological sites.

- (iii) Consultation with the tangata whenua to identify waahi tapu and other sites requiring protection.
- (iv) Sites identified by the Community which are considered to have cultural heritage value for the District, but which are not classified by the Trust, (ie sites identified through the consultation process of the Draft District Plan).
- (v) Sites subject of a heritage order under the Resource Management Act 1991.

### 6.1.2 RESOURCE MANAGEMENT ISSUES

- (1) It is important for the District to retain significant aspects of its heritage as it is a matter of national importance under the RMA and for the benefit of both present and future generations. Buildings, objects, and places of historical, architectural, scientific or other interest are valuable natural and physical resources (both in terms of landscape and visual appeal and as a record of human development).
- (2) Many sites and places are vulnerable to modification or destruction as the result of land development. In order to preserve this heritage, it is important to identify those significant heritage items and put in place a system of recognition and protection.
- (3) The Historic Places Act 1993 provides protection for archaeological sites only. The register of historic places, historic areas, waahi tapu and waahi tapu areas compiled by the Trust does not afford full protection to these features unless a heritage order is imposed. Without the funding base to pursue many heritage orders, the Trust must rely to a large extent on negotiated solutions.
- (4) There has been inadequate identification of the heritage features. For protection to occur, the heritage features need to be fully identified, researched and documented. The work undertaken for the Second Review of the District Plan has improved the level of knowledge and provides a more comprehensive listing and more details of heritage sites.
- (5) The provisions of the RMA (amongst other legislative changes), clearly give Council a responsibility and mandate for the protection of heritage items. The District Plan process provides for public input and makes much better provision for the expression of community desires on the levels of protection, than is provided by the Historic Places Act 1993. A predominantly regulatory approach implemented in the first generation of district plans coupled often with inadequate consultation has in some instances created a negative perception amongst some owners of heritage items.
- (6) Council recognises that ongoing consultation with the tangata whenua is necessary to ensure that waahi tapu and other sites are recognised in a culturally appropriate manner and that acceptable mechanisms are put in place for their protection. Council accepts that in some circumstances there is an inherent conflict between the identification of waahi tapu and their protection, and that the role of the District Plan may be limited because it is a public document. In some instances, the Maori Community may not wish to have particular sites identified.

### 6.1.3 OBJECTIVES AND POLICIES

#### (1) OBJECTIVE 1

To protect a range of built heritage items that reflect the past history of the Hauraki District from the adverse environmental effects of other activities.

##### (a) Policies

Objective 1 will be achieved by the implementation of the following policies:

- (i) Recognise that it is not sustainable to protect all built heritage in the District and that some items have greater heritage value and deserve a higher level of protection than others.
- (ii) Using a range of regulatory, non-regulatory and incentive means to protect built heritage features.
- (iii) Liaising with and seeking advice from the Historic Places Trust on heritage planning generally and on all matters relating to sites registered by the Trust.
- (iv) Consulting with and seeking advice from the Tangata Whenua on all matters relating to identified waahi tapu sites, areas, and other features of significance to them.
- (v) Drawing the attention of developers to the requirements of the Historic Places Act 1993 where the Council is of the view a proposed development may involve the destruction, damage, or modification of any archaeological site.

##### (b) Reasons

- (i) Throughout the District, there are buildings, objects, items and sites which are associated with early Maori and European settlement. Council recognises that these features form an important and significant part of the visual, historical, and spiritual character of the District and as such wishes to ensure that they are protected for the benefit of present and future generations.
- (ii) While recognising that the Historic Places Trust has a significant role to play in the protection of the District's cultural heritage, the Historic Places Act 1993 does not afford full protection to built heritage features. To ensure adequate protection is afforded to those more significant heritage features in the District, a combination of regulation and incentive is considered by Council to offer the best solution.
- (iii) The Historic Places Trust has the knowledge and expertise on sites registered under the Historic Places Act and on historic sites generally. It is therefore appropriate that Council seeks the Trust's advice wherever appropriate. Likewise the knowledge and expertise of the Tangata Whenua will be employed where appropriate to assist Council in its duties.
- (iv) Under the Historic Places Act, it is illegal to destroy, damage or modify the whole or part of any archaeological site without first obtaining an authority from the Historic Places Trust. Council wishes to actively support this requirement and will assist in this implementation by making developers aware of such sites (within its knowledge) and requiring that consent be obtained from the Historic Places Trust.

### (2) OBJECTIVE 2

To promote greater public awareness of the value of and need to protect those features which are of heritage value to the District.

#### (a) Policies

Objective 2 will be achieved by the implementation of the following policies:

- (i) Providing special incentives in the form of monetary assistance, advice, site identification and other appropriate means specified from time to time.
- (ii) Liaising and cooperating with landowners of heritage sites, tangata whenua and other groups and organisations involved in the protection of features of heritage value.

#### (b) Reasons

- (i) Statutory provisions alone cannot ensure protection of the District's heritage. Identification of significant heritage features on the planning maps and the Council Land Information System will enable Council staff to readily identify these items and if necessary warn developers of their existence. In addition it also helps to draw public attention to them. It is essential that the general public and in particular the land owners concerned participate in their protection.
- (ii) Incentives help provide positive encouragement, rather than the negative response a regulatory approach can create.
- (iii) The Historic Places Trust, the tangata whenua and other groups and organisations involved in the protection of cultural heritage resources have considerably more experience and expertise than Council in these matters. It is therefore appropriate that Council liaises and seeks advice from these groups and organisations.

### (3) OBJECTIVE 3

Sustainable management of the built heritage resource by encouraging and promoting adaptive reuse of the built heritage features resource.

#### (a) Policies

Objective 3 will be achieved by the implementation of the following policies:

- (i) Enable adaptive reuse of built heritage features provided any adverse effects of the activity can be avoided, remedied or mitigated.
- (ii) Relaxation or waiving parking requirements or bulk and location rules where this would encourage sustainable reuse.
- (iii) Ensure repairs, alterations or additions to built heritage features retain and enhance the identified heritage values of the feature.

### 6.1.4 ENVIRONMENTAL RESULTS

- (1) The environmental result sought through the District Plan is to provide adequate protection of the District's significant heritage features and ensure they are not adversely impacted by land use activities.
- (2) Whilst this result can to some extent be met through the functions and powers of the Historic Places Trust, the District Plan process provides the opportunity to increase public awareness and appreciation of the District's cultural heritage and allows a coordinated approach for the protection of all heritage features recognised by the community as being "significant".

### 6.1.5 ACTIVITIES

#### 6.1.5.1 EXCEPTIONS

##### (1) Archaeological Sites

- (a) There are no rules applying in the District Plan with respect to archaeological sites. All known archaeological sites are shown on the Planning Maps for information purposes only.
- (b) The Historic Places Act 1993 provides for the recording, protection and preservation of archaeological sites whether registered or not.
- (c) An authority must be obtained from the Historic Places Trust to damage, modify or destroy an archaeological site.

#### 6.1.5.2 PERMITTED ACTIVITIES

##### (1) The following are permitted activities:

- (a) *Minor works* to any item in Category A or B as set out in the Schedule of Historic Heritage Inventory, for the purpose of redecoration, restoration, repair and/or minor alterations of any existing materials or detailing which is carried out in a manner and design and with the same or similar materials to those originally used and which will not detract from the features for which the item has been protected.
- (b) Works for the purpose of carrying out any activity in relation to or in the vicinity of any item in Category A or B as set out in the Schedule of Historic Heritage Inventory which will reduce any existing or potential danger to that item or will reduce the likelihood of immediate danger to any person.

#### 6.1.5.3 CONTROLLED ACTIVITIES

- (1) The following are controlled activities and shall be assessed in relation to the criteria specified in 6.1.5.4 below:
  - (a) Alteration or addition to any item in Category B as set out in the Schedule of Historic Heritage Inventory.

- (b) Removal and relocation of any item in Category B as set out in the Schedule of Historic Heritage Inventory.
- (c) Removal of any structure, accessory or other detached building, path, road, lighting standard, wall or fence and planting of any vegetation, trees or hedges on the site of any Category B item where the building and/or curtilage are protected as set out in the Schedule of Historic Heritage Inventory.
- (d) Construction of any structure, accessory or other detached building, path, road, lighting standard, wall or fence and planting of any vegetation, trees or hedges on the site of any Category B item where the building and/or curtilage are protected as set out in the Schedule of Historic Heritage Inventory.

#### 6.1.5.4 ASSESSMENT CRITERIA FOR CONTROLLED ACTIVITIES

- (1) The following criteria will be used to assess a controlled activity:
  - (a) Reasons for inclusion of the feature in the schedule and the extent to which the values are retained.
  - (b) Degree of modification or alteration that will be caused to the feature.
  - (c) Design, materials and finish of proposed alterations or additions to the feature listed in Category B.
  - (d) Appropriateness of the proposed site, when relocation is proposed.
  - (e) The ability of the item to withstand relocation from a structural perspective.
  - (f) Impact on the cultural landscape or streetscape values from an amenity and heritage perspective.
  - (g) Whether the conservation principles contained within the ICOMOS NZ Charter for the Conservation of Places of Cultural Heritage Value are applicable, and where applicable, have they been substantially adhered to.

#### 6.1.5.5 DISCRETIONARY ACTIVITIES

- (1) The following are discretionary activities and shall be assessed in relation to the criteria in Rule 6.1.5.6 below:
  - (a) Alteration or addition to any item in Category A as set out in the Schedule of Historic Heritage Inventory.
  - (b) Removal and relocation of any item in Category A as set out in the Schedule of Historic Heritage Inventory.
  - (c) Removal of any structure, accessory or other detached building, path, road, lighting standard, wall or fence and planting of any vegetation, trees or hedges on the site of any Category A item where the building and/or curtilage are protected as set out in the Schedule of Historic Heritage Inventory.
  - (d) Construction of any structure, accessory or other detached building, path, road, lighting standard, wall or fence and planting of any vegetation, trees or hedges on the site of any Category B item where the building and/or curtilage are protected as set out in the Schedule of Historic Heritage Inventory

- (e) Demolition of any item in Category B as set out in the Schedule of Historic Heritage Inventory.

**6.1.5.6 ASSESSMENT CRITERIA FOR DISCRETIONARY ACTIVITIES**

- (1) The assessment criteria for controlled activities set out in Rule 6.1.5.4 above.
- (2) Whether the relationship of the listed item with its setting is maintained.

**6.1.5.7 NON COMPLYING ACTIVITIES**

- (1) The following are non complying activities:
  - (a) The demolition of a heritage item listed in Category A as set out in the Schedule of Historic Heritage Inventory.
  - (b) Any activity not provided for as a permitted, controlled, discretionary or prohibited activity.

**6.1.5.8 PROHIBITED ACTIVITIES**

- (1) There are no prohibited activities.

**6.1.6 SCHEDULE OF HISTORIC HERITAGE INVENTORY – CATEGORY A**

Item	Map No.	Description	Location	Type1	Type2	Themes	Significance	Town / Locality	Ward	Heritage Status

## 6.2 NATURAL AREAS OF ECOLOGICAL SIGNIFICANCE

### 6.2.1 BACKGROUND

#### (1) PART 2 RMA

- (a) Part 2 of the Resource Management Act 1991, places a responsibility on the Council to recognise and provide for the general protection of areas of significant indigenous vegetation and habitats of indigenous fauna as a matter of “national importance” (Section 6c). Section 7 also requires Council to have particular regard to the maintenance and enhancement of amenity values and the intrinsic value of ecosystems.

#### (2) HAURAKI DISTRICT

- (a) The Hauraki District spans a range of natural features from the east coast of the Coromandel Peninsula across the Hauraki Plains to the Hapuakohe Range. Continued development in the District has meant that much of the natural landscape has been significantly modified. However, the District still contains many areas which contribute to the natural heritage of the area. These include a variety of indigenous forest habitats and coastal and freshwater wetlands.

#### (3) FOREST AREAS

- (a) A range of native forest types is found within the District.
- (b) Coastal Forest is found on the east coast of the Coromandel Peninsula, but only remnants of the once more extensive original pohutukawa-puriri-karo broadleaved forest remains. Areas of regenerating coastal forest do occur, eg north of Whiritoa.
- (c) Inland, over the Coromandel Peninsula, lowland podocarp-tawa forest is the predominant forest type. Most of this forest in the Hauraki District has been modified by logging and burning. The best examples of this forest are protected in the Coromandel and Kaimai-Mamaku Ranges within the Department of Conservation (DOC) estate whilst remnants do exist on other public and private land. Most the protected forests lie above 200m. Lowland and semi-coastal forest-types such as podocarp forest of kahikatea, rimu, totara and occasional matai are generally not protected and have been reduced to remnants due to the desirability of the land for farming. The best examples of this forest are found in the Waitekauri Valley. Kauri forest was originally found as dense stands especially south of the Karangahake Gorge. These have almost all been logged but now some good stands of regenerating kauri can be found on other public and private land south of the gorge such as in Taieri Valley. Across the Hauraki Plains there was little dry land originally and consequently the only forest types found are wetland forests.
- (d) The Hapuakohe Range runs along the western side of the Hauraki District and in addition to the Matahura Scenic Reserve (DOC), still has several remnants of original forest along its length. These remnants are in other public and private ownership and

comprise a mixed broadleaved forest of tawa and kohekohe often with coastal species such as puriri, due to the proximity to the Firth of Thames. There are large podocarps such as rimu, kahikatea and totara though most of these have been removed by logging, making remnants with tall podocarps significant. There are also pockets of kauri with hard beech which is a distinct forest type once common to the hills in the Waikato Region but now very rare. Most of the forest remnants on the Hapuaokohe Range have been disturbed by logging and they have been further reduced in recent years by clearance for farming and afforestation with pines. The forest remnants existing on the Range are close enough together to provide a range of habitat and food sources for native birdlife such as kereru, bellbird and tui. Kokako were present along the Range but have not been recorded in recent years probably due to habitat degradation and predators. The forest remnants also serve an important function in the prevention of gully erosion and maintenance of water quality.

#### **(4) WETLANDS**

Wetlands, like the indigenous forests, have also been significantly reduced or severely modified as a result of agricultural developments.

##### **(a) Coastal Wetlands**

- (i)** Small areas of mangroves are located within the Hauraki District (eg Piako River mouth area) which are part of the much larger mangrove forest along the southern margin of the Firth of Thames.
- (ii)** Other coastal wetlands are found on the east coast of the Coromandel Peninsula. Several good examples of these coastal wetland ecosystems exist, such as the Otahu River mouth (which supports a good range of natural wetland habitats on alluvial flats and still retains the complete sequence from coastal to freshwater wetlands and the transition from natural aquatic systems to regenerating coastal forest on the southern side). Whiritoa Beach lies at the mouth of two streams which both support coastal wetland systems and a dune system.
- (iii)** These coastal wetland systems provide habitats for a range of birds including threatened species such as North Island fernbird, Australasian bittern, spotless crane and banded rail.

##### **(b) Mineralised Swamp and River Margins**

- (i)** Most of the river margins on the Plains have been highly modified, with the vegetation comprising predominantly grazed or ungrazed pasture species. Those river margins and river islands which are willow dominated have significant conservation values. Seasonally inundated willow forest provides breeding/feeding habitat for a range of aquatic and bird species.
- (ii)** Mineralised swamps still exist but are of quite a different vegetation composition than they would have been originally. The predominant overstorey canopy consists of crack and pussy willow (*Salix* sp) with emergent cabbage trees in places.
- (iii)** Mineralised swamp areas usually support more species and higher overall numbers of native and introduced birds than would a similar sized stand of native

bush. The two islands on the Waihou are excellent examples of these mineralised swamps.

**(c) Kahikatea Forest**

- (i)** Away from the edges of the rivers, there are scattered stands of kahikatea dominated swamp forest. These are remnants of a forest which 240 years ago Captain James Cook described as a "huge wall of trees" along both banks of the Waihou.
- (ii)** Numerous small stands of kahikatea are found along the margins of the Waihou River. Most of these are highly modified being grazed beneath and on drained farmland. Sustainable kahikatea forest requires seasonal flooding with sediment laden water and to be stock free. Most of the stands on the Hauraki Plains do not have either of these features.
- (iii)** Even stands that are fenced from stock will require management in order to flourish. Nevertheless there are several fine stands worth protecting for their existing values today and their contribution to the landscape values of the Hauraki District.

**(d) Peat Bogs**

- (i)** The only unprotected, unmodified peat bog areas remaining on the Hauraki Plains are the remnants of the Pouaroa Peat Dome. Both other remnants, ie Kopuatai and Torehape, are Government Purpose (Wetlands Management) Reserves.
- (ii)** The Pouaroa Peat Dome remnants are at present being developed (peat mining, farming). It is not proposed to provide any specific protection to this area for conservation purposes through the District Plan.

**(5) OTHER LEGISLATION**

In addition to the Council's responsibility under Resource Management Act 1991, other legislation confers powers on other agencies to provide for the protection of areas of significant indigenous flora and significant habitats of indigenous fauna. There is also the requirement under Sections 6(a) & (b) and 39(4) & (5) of the Conservation Act 1987 for the protection of all fisheries within the District from the effects of land use and this interrelates with the requirements of Sections 6 & 7 of the Resource Management Act 1991.

**(a) Conservation Act 1987**

- (i)** The purpose of this Act is to advocate and promote the conservation of New Zealand's natural and historic resources and for that purpose provides for the establishment of the Department of Conservation. Under the provisions of Section 7 of the Act, the Department can acquire and hold land for conservation purposes. Land held by the Department under the Conservation Act is described as a conservation area. There are also provisions in the Act for protection of conservation values on private land. Under Section 27 the Minister of Conservation may by agreement enter into a covenant with a private land owner for conservation purposes. Section 29 of the Act makes provision for an agreement or arrangement between the Minister and the landowner for the management of land so as to conserve any natural or historic resource.

**(b) Reserves Act 1977**

- (i) This Act sets out the provisions by which land is given reserve status, and the means by which such land is managed. Under the Act, the Council or the Department of Conservation can protect land of important recreational, natural or special value in a variety of ways. Both the Council and the Department can buy land to be held as reserve under this Act. The Act also makes provision for private land protection. Under Section 76, a private owner can apply to have the land declared to be protected private land on account of its natural, scenic, historic, cultural, archaeological, geological or other interest. The Crown and any local authority may agree to enter into a conservation covenant under Section 77 of the Reserves Act to protect private land to preserve the natural environment, landscape amenity, wildlife or marine life or fresh water life habitat.

**(c) Wildlife Act 1953 and Amendment Act 1985**

- (i) This Act provides for the protection and control of wild animals and birds, the regulation of game shooting seasons, and the constitution and powers of Fish and Game Councils. Various classes of wildlife are protected in varying degrees. Wildlife sanctuaries may be proclaimed by the Governor General, and various conditions may be imposed to protect and preserve wildlife in these areas. The Wildlife Amendment Act 1985 provides for the establishment of wildlife management reserves in addition to sanctuaries and refuges. The Department of Conservation manages all wildlife sanctuaries, wildlife refuges and management reserves. Private landowners can apply to have wildlife habitat areas classified as Wildlife Refuges.

**(d) Queen Elizabeth II National Trust Act 1977**

- (i) The Trust has been established to encourage and promote the provision, protection and enhancement of open space for the benefit and enjoyment of the people in New Zealand. The Trust is able to enter into agreements with landowners for open space covenants or to purchase land and maintain it as areas of open space. An open space covenant means providing permanent protection to natural resources at the same time as retaining the land in private ownership. There are several such covenants with the Hauraki District at present.

**(e) Forests Amendment Act 1993**

- (i) This Act controls the cutting of indigenous forests for timber. It does not apply to tree felling for say the development of farmland if the timber cleared is not milled (it is burned off, left to waste, etc). However the cutting and milling of indigenous timber cleared to create farmland or any other purpose is managed under the Act.
- (ii) Land owners have to submit and comply with a sustainable forest management plan approved by the Secretary of Forestry. Section 67(v) of the Act requires the owner to obtain a resource consent should this be required under the RMA. Relevant details of the District Plan and Regional Plan are to be included in a sustainable management plan.

**(6) UNPROTECTED CONSERVATION VALUES****(a) Introduction**

- (i) This Section of the Plan deals with the areas of significant indigenous vegetation and habitat of indigenous fauna held in public ownership (outside the Department of Conservation estate) and private ownership.
- (ii) The management of land use activities within the Department of Conservation estate and on land held for conservation purposes is covered by the Conservation Indigenous Forest and Conservation Wetland Zones (refer Sections 5.2 and 5.3).

**(7) IDENTIFICATION AND CLASSIFICATION OF SITES**

- (a) The Waikato Regional Council in conjunction with the Hauraki District Council has undertaken a full review of all protected and unprotected sites of conservation value within the Hauraki District. The sites were identified from existing information held by both Councils and other organisations.
- (b) An aerial survey of all the sites was carried out to assess the condition of the features and the existing and/or potential threats to their continued survival. The aerial surveys were supplemented by ground truthing of a representative number of sites across the District.
- (c) The sites were then ranked using the criteria for determining significant indigenous vegetation and significant habitats of indigenous fauna contained in Appendix 3 to the Waikato Regional Policy Statement.

**6.2.2 RESOURCE MANAGEMENT ISSUES**

- (1) The retention of natural areas is essential to ensure the survival of the richness and variety of plants and animals and their habitats. This richness and variety contributes significantly to the District's natural character. It is also important because such areas contribute to the wellbeing of the District's inhabitants through their role in water and soil conservation, ecological stability, recreational use, landscape character and natural beauty, and places for educational and scientific study.
- (2) In order to conserve the natural wildlife resource in the District, it is necessary to protect and conserve the natural environments on which wildlife depends. By conserving a network of natural areas throughout the District, the diversity and abundance of wildlife and their habitats can be maintained. This network of natural areas also ensures the maintenance of a corridor of habitats important for the migratory movement of birds.
- (3) The key resource management issue relates to the methods which should be used to protect sites of significant indigenous vegetation and significant habitat areas.
- (4) While the techniques to be adopted need to adequately reflect the strength of the statutory language of the relevant sections of the Act, the Council acknowledges the need for community compensation where an owner may be unreasonably compromised by undue restrictions placed on an identified site (eg rates relief, subsidies, purchase, removal of

controls). No sites have been scheduled in the Plan without the affected landowners first having been approached and their views sought.

### 6.2.3 OBJECTIVES AND POLICIES

#### (1) OBJECTIVE 1

To protect remnant areas of significant indigenous vegetation and habitats of indigenous fauna for the purpose of preserving their intrinsic and amenity values for the benefit and enjoyment of future generations.

##### (a) Policies

Objective 1 will be achieved by the implementation of the following policies:

- (i) Ranking natural areas in terms of their relative significance using recognised methods.
- (ii) Providing incentives and development opportunities where protection and management of natural areas of ecological significance is obtained.

##### (b) Reasons

- (i) To ensure adequate protection is afforded to those natural areas identified as having significance, a combination of voluntary techniques and regulatory measures within the District Plan is considered by Council to offer the best solution.
- (ii) Identifying the relative value of the areas in the District Plan ensures that appropriate levels of protection are provided.

#### (2) OBJECTIVE 2

To promote greater public awareness, support for and involvement in the protection of remnant natural areas of ecological significance.

##### (a) Policies

Objective 2 will be achieved by the implementation of the following policies:

- (i) Providing special incentives to landowners.
- (ii) Maintaining communication with affected landowners, Department of Conservation, iwi and other organisations who can assist in the management and conservation.
- (iii) Ensuring that information obtained and other legislative means of protection are readily available to the public.

##### (b) Reasons

- (i) Statutory provisions alone cannot ensure the protection of remnant natural areas of ecological significance. The cooperation of affected landowners and the general public is essential to achieving the conservation of these areas.

- (ii) The District Plan is a suitable public document to help raise public awareness of the existence of the District's remaining natural areas of ecological significance.
- (iii) Incentives provide a positive encouragement for conservation and ensure that individual owners are compensated for restrictions imposed.
- (iv) Maintaining communication with affected landowners, Department of Conservation, iwi and other organisations is essential because this objective cannot be achieved by Council in isolation. Cooperation, assistance and advice is required from these individuals and agencies.
- (v) Ensuring information is readily available on identified natural areas of ecological significance helps increase landowner and general public understanding and support for the conservation measures advocated.

#### **6.2.4 ENVIRONMENTAL RESULTS**

- (1) The expected environmental result is the protection of the District's remaining areas of significant indigenous vegetation and significant habitats of indigenous fauna outside the Department of Conservation estate because of the contribution these areas make to the natural character of the District and for the maintenance of ecological stability and diversity, for the District and Region.

#### **6.2.5 ACTIVITIES**

##### **6.2.5.1 EXCEPTIONS**

- (1) Trimming or pruning of any tree, bush or plant, necessary because of disease or age and which will not directly result in the death, destruction or irreparable damage of the tree, bush or plant.
- (2) Removal of dead or damaged trees, where this is shown to be necessary to avoid adverse effects on remaining trees or vegetation.

##### **6.2.5.2 PERMITTED ACTIVITIES**

- (1) The following land management activities are permitted activities for all areas listed in the Schedule of Natural Areas of Ecological Significance:
  - (a) Planting and management of indigenous vegetation;
  - (b) Removal of exotic trees and vegetation;
  - (c) Pest destruction;
  - (d) Weed removal and perimeter fencing; and
  - (e) Maintenance of existing tracks and fences.

### 6.2.5.3 CONTROLLED ACTIVITIES

- (1) The following are controlled activities and shall be assessed in relation to the criteria specified in Rule 6.2.5.4 below:
- (a) Any land management activity specified in Permitted Activity Rule 6.2.5.2 (except where located within an identified Water Supply Catchment shown on the planning maps) that will alter the botanical, ecological or wildlife value of any natural areas of ecological significance listed in the Schedule of Natural Areas of Ecological Significance as having the following level of significance:
    - (i) Regional & Low;
    - (ii) Local & Low
  - (b) Tracking and fencing where this activity would not involve the removal of any indigenous vegetation over 3m in height for areas listed in the Schedule of Natural Areas of Ecological Significance as having the following level of significance:
    - (i) Regional & High
    - (ii) Regional & Moderate
    - (iii) Regional & Low
    - (iv) Local & Moderate
    - (v) Local & Low
  - (c) Any land management activity not provided for under Permitted Activity Rule 6.2.5.2 and/or Controlled Activity Rule 6.2.5.2(a).

### 6.2.5.4 ASSESSMENT CRITERIA FOR CONTROLLED ACTIVITIES

- (1) The following criteria will be used to assess any application for a controlled activity:
- (a) The criteria satisfied for inclusion of the natural area in the Schedule.
  - (b) The nature, form and extent of the proposed development, activity, alteration or change and its affect on the protected natural area.
  - (c) The nature, form and extent of the proposed development, activity, alteration or change and its affect on any Identified Water Supply Catchment Area shown on the planning maps.
  - (d) The degree of modification or damage that will be caused to the protected natural area and the nature and extent of any proposed rehabilitation.
  - (e) Whether there is a reasonable alternative siting for the proposed development, or activity that will result in a nil or lesser impact on the protected natural area.

### 6.2.5.5 DISCRETIONARY ACTIVITIES

- (1) The following are discretionary activities and shall be assessed in relation to the criteria in Rule 6.2.5.6:

- (a) Any activity that will alter the botanical, ecological or wildlife value of any natural areas of ecological significance listed in the Schedule of Natural Areas of Ecological Significance as having the following level of significance:
  - (i) National & Moderate
  - (ii) Regional & High
  - (iii) Regional & Moderate
  - (iv) Local & Moderate
- (b) Any activity that will alter the botanical, ecological or wildlife value of any Natural Area of Ecological Significance listed in the Schedule of Natural Areas of Ecological Significance, within an Identified Water Supply Catchment Area shown on the planning maps.

#### 6.2.5.6 ASSESSMENT CRITERIA FOR DISCRETIONARY ACTIVITIES

- (1) The following criteria will be used to assess any application for a discretionary activity:
  - (a) The assessment criteria for controlled activities set out in Rule 6.2.5.4 above.
  - (b) Water Supply Catchment Areas Only
- (2) In addition to the criteria in (a) above, the following criteria will be used to assess any activity within an Identified Water Supply Catchment Area:
  - (a) The extent to which sediment runoff or contaminants generated by the proposal may affect the potability (drinkable standard) of water from the catchment.
  - (b) The extent to which the quantity of water available for and from water supply catchments will be reduced in the long or short term by the proposal.

#### 6.2.5.7 NON COMPLYING ACTIVITIES

- (1) Any activity not provided for as a permitted, controlled, discretionary or prohibited activity.

#### 6.2.5.8 PROHIBITED ACTIVITIES

- (1) There are no prohibited activities.

**6.2.6 SCHEDULE OF SIGNIFICANT NATURAL AREAS**

Site No.	Ecosystem	Protection	Tenure	QEII Covenant	NWR Covenant	HDC Covenant	Significance Level	Significance Confidence	Vegetation Description	Area

## 6.3 PROTECTION OF OUTSTANDING NATURAL FEATURES AND LANDSCAPES

### 6.3.1 BACKGROUND

- (1) Section 6, identifies “**Matters of National Importance**”, and requires that –
- “all persons exercising functions and powers under it, in relation to managing the use, development, and protection of natural and physical resources, shall recognise and provide for the following matters of national importance:*
- (a) *The preservation of the natural character of the coastal environment (including the coastal marine area), wetlands, and lakes and rivers and their margins, and the protection of them from inappropriate subdivision, use and development*
  - (b) *The protection of outstanding natural features and landscapes from inappropriate subdivision, use and development:*
  - (c) *The protection of areas of significant indigenous vegetation and significant habitats of indigenous fauna.”*
- (2) Councils are therefore required by the Act to assess the landscape values of their territorial areas and coastlines, to identify the natural character of the coastal environment, wetlands, lakes and rivers and their margins, and to identify outstanding landscapes.
- (3) For the most part, nationally important natural features and landscapes have been identified and included in the Department of Conservation estate (zoned either Conservation Indigenous Forest or Conservation Wetland).
- (4) There are other natural features and landscapes that are outstanding either regionally or locally, that should be protected from inappropriate subdivision, use and development. Section 6(b) relates to such features as well as nationally recognised features.
- (5) Some important landscape features are included within the Conservation Indigenous Forest or Conservation Wetland zones, the Coastal Zone or the Karangahake Gorge Zone which affords a significant level of protection by virtue of the Objectives, Policies and Rules of these zones. In addition, there are rules in the Rural zone that protect landscape features from the adverse effects of some activities within identified areas.
- (6) There are other features that contribute to the character of the District which should be recognised in terms of s6(b). Council has identified a list of areas/features considered to be locally outstanding and which warrant a level of protection. The features include:
- (a) **Black Rocks**  
Important visual feature providing a visual backdrop to Paeroa.
  - (b) **White Rock**  
Exposed portion of a gold bearing quartz reef. This feature is prominent from State Highway 2 and other points in the Paeroa area.

**(c) Queen's Head**

Land form feature near Waikino which resembles the head of Queen Victoria.

**(d) Parakawai Andesitic Neck**

Columnar jointed andesite neck located in a disused quarry at the end of Parakawai Quarry Road, Otahu Valley.

**(e) Whiritoa Blowhole**

The most spectacular active blowhole on the Coromandel Peninsula located at southern Headland of Whiritoa Beach which is active during easterly storms. Included within the Coastal Zone.

**(f) Waitawheta Andesitic Columns**

Columns of andesite adjoining the Taieri Stream.

**(g) Owharoa Falls**

Spectacular waterfall on Taieri Stream. Access is from Waitawheta Road. Included within the Karangahake Gorge Zone.

**(h) Mount Karangahake**

Substantial feature at entrance to the Karangahake Gorge which provides a visual backdrop to Paeroa. The lower slopes are largely in private ownership and partly in pasture. The summit area is in regenerating forest and scrub and is part of the Department of Conservation estate. Majority included within the Karangahake Gorge Zone.

### 6.3.2 RESOURCE MANAGEMENT ISSUES

- (1)** Outstanding landscape features and landscapes of district wide significance may be adversely affected or degraded as a result of land use and subdivision activities.
- (2)** The area/feature which is probably most susceptible to damage is the Karangahake Gorge Corridor. The removal of existing vegetation (indigenous or otherwise) would have a significant and detrimental effect on the scenic quality of the area. The Department of Conservation is developing the Karangahake Walkway as a tourist attraction, including developing the concept into a heritage trail focusing on past mining activities. The visual quality of the area should be maintained and enhanced to augment the walkway experience and the scenic highway experience.
- (3)** Large parts of the Coromandel Range have been identified as an outstanding landscape. Activities on some public and privately owned land within the outstanding landscape have the potential to adversely affect the scenic landscape qualities.

### 6.3.3 OBJECTIVES AND POLICIES

#### (1) OBJECTIVE 1

Protect the special landscape qualities and features of those areas of the District that have been identified as an outstanding landscape or a landscape of district wide significance.

##### (a) Policies

Objective 1 will be achieved by the implementation of the following policies:

- (i) Requiring particular attention to be paid to the achievement of this objective in considering applications for resource consent for activities that may affect scheduled features.
- (ii) Within the areas identified as an outstanding landscape, or a landscape of district wide significance land use activities are restricted by rules and other provisions of the District Plan.
- (iii) To ensure the outstanding natural coastal environment features and coastal environment landscapes are preserved and protected from inappropriate subdivision, use and development.
- (iv) To encourage and provide for appropriate development which will remedy or mitigate the adverse effects of past land uses and enhance the natural character and amenity values of the coastal environment.
- (v) To promote the restoration and enhancement of existing degraded natural features and landscapes.

##### (b) Reasons

- (i) Identification of the features and landscapes will provide a reasonable measure of protection, given the relatively limited level of threat they are considered to be exposed to.
- (ii) The Coastal Zone provisions recognise the legislative imperative for the protection of the coastal environment.
- (iii) The Karangahake Gorge Zone is required to ensure that changes in land use do not adversely affect visual amenity.
- (iv) Rules in the Rural Zone protect landscapes from inappropriate use and development.

### 6.3.4 ENVIRONMENTAL RESULTS

- (1) Recognising the significant, ecological, landscape, amenity and heritage values of the District and the need to facilitate the protection and enhancement of these features and areas.

## 6.3.5 ACTIVITIES

### 6.3.5.1 PERMITTED ACTIVITIES

(1) The following land management activities are permitted activities for all features and landscapes listed in the Schedule of Outstanding Natural Features:

- (a) Planting and management of indigenous vegetation;
- (b) Removal of exotic trees and vegetation;
- (c) Pest destruction;
- (d) Weed removal and perimeter fencing; and
- (e) Maintenance of existing tracks and fences

### 6.3.5.2 DISCRETIONARY ACTIVITIES

(1) The following are discretionary activities and shall be assessed in relation to the criteria in Rule 6.3.5.3:

- (a) Any activity that will alter the value of any features listed in the Schedule of Outstanding Natural Features.

### 6.3.5.3 ASSESSMENT CRITERIA FOR DISCRETIONARY ACTIVITIES

(1) The following criteria will be used to assess any application for a discretionary activity:

- (a) The reasons for inclusion of the feature within the Schedule of Outstanding Natural Features.
- (b) The nature, form and extent of the proposed development, activity, alteration or change and its affect on the feature as shown on the planning maps.
- (c) The degree of modification or damage that will be caused to the feature within the Schedule of Outstanding Natural Features and extent of any proposed rehabilitation.
- (d) Whether there is a reasonable alternative siting for the proposed development or activity that will result in a nil or lesser impact on the feature.

### 6.3.5.4 NON COMPLYING ACTIVITIES

(1) Any activity not provided for as a permitted, controlled, discretionary or prohibited activity.

### 6.3.5.5 PROHIBITED ACTIVITIES

(2) There are no prohibited activities.

### 6.3.6 SCHEDULE OF OUTSTANDING NATURAL FEATURES

MAP NOS.	ITEM NO.	FEATURE	FEATURE TYPE	APPROX. LOCATION
8	F1	Parakaiwal Andesitic Neck	Unusual Geological Feature	Parakaiwal Quarry Road, Whangamata
13	F2	Black Rocks	Visual	Hills northeast of Paeroa

20	F8	Queen's Head	Visual	State Highway 2 (between Waikino & Waihi)
E	F9	Whiritoa Blow Hole	Unusual Geological Feature	South end of Whiritoa Beach

## 6.4 RECOGNITION AND PROTECTION OF SIGNIFICANT TREES

### 6.4.1 BACKGROUND

- (1) Individual trees and groups of trees in addition to identified areas of indigenous vegetation can be of significance to the community, particularly in urban areas. Their significance can arise from their historical and cultural associations, botanical value or amenity (visual) value - size, location & appearance. Often these trees will be exotic rather than indigenous.
- (2) Land in public ownership often includes well established trees and groups of trees that provide a pleasant setting for buildings and give the towns a pleasant appearance/character. Trees on private property add to the overall appearance/character of the urban environment.
- (3) In a similar way to the protection/recognition afforded to significant stands of indigenous vegetation in the rural area, Council proposes to provide protection/recognition to significant urban and rural trees.
- (4) A survey of the urban areas has been carried out to identify the significant trees located on public land (ie that owned by the Crown, Council and other public bodies).
- (5) This is seen as a starting point for the register which is expected to grow over time as individuals seek to provide a similar level of protection/recognition for trees on their own private property. Trees on private land will only be added to the register at the request of the land owner. A number already appear on the register through this mechanism.

### 6.4.2 RESOURCE MANAGEMENT ISSUES

- (1) The retention of trees is desirable because of the contribution they make to the amenities of urban areas in particular, their historical associations and their botanical values. Subdivision and urban intensification leads to increased pressure for the removal of urban trees. Urban amenity values can only be retained if the trees are protected from removal.

### 6.4.3 OBJECTIVES AND POLICIES

#### (1) OBJECTIVE 1

To maintain and improve the significant trees resource for the purpose of preserving their intrinsic, historical, cultural and amenity values for the benefit and enjoyment of future generations.

#### (a) Policies

Objective 1 will be achieved by the implementation of the following policies:

- (i) Protect significant trees from the adverse effects of development.
- (ii) Encourage developments that retain significant trees.
- (iii) Promote greater public awareness of and support for the protection of significant trees.

(iv) Giving public recognition to those people who have volunteered their trees for protection.

**(b) Reasons**

(i) To ensure adequate protection is afforded to those urban and rural trees identified as having significance, a combination of regulatory measures through the District Plan and voluntary techniques is considered by Council to offer the best solution. Statutory provisions alone cannot ensure the protection of trees. The co-operation of affected landowners and the general public is essential to achieving the preservation of individual trees and groups of trees.

(ii) The District Plan is a suitable public document to help raise public awareness of the existence of significant trees.

(iii) Ensuring information is readily available on identified trees helps increase landowner and general public understanding and support for the preservation measures proposed.

(iv) The procedure of District Plan changes applied to all additions or removals from the register ensures that the rights of private property owners can be considered in relation to the overall desires of the community.

### 6.4.4 ENVIRONMENTAL RESULTS

(1) Urban and rural amenity values protected through the retention of significant urban and rural trees.

(2) Increased public awareness of the value of significant trees and the responsibility of landowners in their protection.

### 6.4.5 ACTIVITIES

#### 6.4.5.1 PERMITTED ACTIVITIES

(1) The following are permitted activities:

(a) Trimming or pruning of any identified tree listed in the Schedule of Significant Trees necessary because of disease or age and which will not result in the death, destruction or irreparable damage to the tree.

(b) Minor pruning or shaping necessary to maintain or enhance the value of the tree listed in the Schedule of Significant Trees.

(c) Removal or destruction (partial or total) of any tree listed in the Schedule of Significant Trees for emergency purposes.

#### 6.4.5.2 CONTROLLED ACTIVITIES

(1) There are no controlled activities.

#### 6.4.5.3 DISCRETIONARY ACTIVITIES

- (1) The following are discretionary activities and shall be assessed in relation to the criteria specified in Rule 6.4.5.4 below:
- (a) Any activity not provided for as a permitted activity.

#### 6.4.5.4 ASSESSMENT CRITERIA FOR DISCRETIONARY ACTIVITIES

- (1) The following criteria will be used to assess any application for a discretionary activity:
- (a) The reasons for inclusion of the tree in the Schedule of Significant Trees;
- (b) The degree of modification or damage that will be caused to the tree;
- (c) The extent to which the work will:
- (i) enhance or reduce the overall value of the tree by altering its assessment criteria values; and/or
- (ii) enhance or reduce the value of other protected trees in the group or vicinity.
- (d) The extent to which the tree constitutes or is likely to become a hazard
- (e) Whether the tree is causing or is likely to cause structural damage to infrastructure, structures or buildings.
- (f) Are there alternatives to the development proposed that would avoid the need for the work to be done on the tree or its removal.

#### 6.4.5.5 NON COMPLYING ACTIVITIES

- (1) There are no non-complying activities.

#### 6.4.5.6 PROHIBITED ACTIVITIES

- (1) There are no prohibited activities.

## 6.4.6 SCHEDULE OF SIGNIFICANT TREES

ID	Description	Location	Botanical Name	Common Name	Category	MAP
TR068	Grove of Redwoods at No. 451 Maratoto Road, Paeroa	529 Maratoto Road, Paeroa	<i>Sequoia sempervirens</i>	Redwood	Visual Amenity	7
